

Commercial Presentation Theatre & Process Equipment Zone (Hall 1)

Day: 25th October
Time: 09,20 - 10,20

ICIM
Speaker: Marco Casaril

Materials and components evaluation for repurposing of industrial plants

Laboratory tests are useful for the evaluation of existing plants when compatibility of the materials is to be verified with different conditions from the initial design.

Test programs can be prepared starting from product standards or agreed with customer's R&D department.

A case study is also described: compatibility tests for black rubber filled with asbestos gasket as taken from service and tested after ageing in MTBE.
